

GREEN & GROWIN' 21

January 11-13, 2021

The Green & Growin' 21 Education Program is 100% online, with more than 25 interactive sessions from the industry's top leaders and educators. Learn new skills or gain credits toward your licenses during the live January broadcast, or view the recordings later on your own schedule. All registered attendees will have access to the sessions until April 30, 2021.

- Log in anytime, anywhere
- Exclusive Monday Q&As with top green industry companies
- Tuesday and Wednesday general education courses
- Watch live to interact with presenters and peers
- CEUs available

For the most current schedule, visit www.greenandgrowin.com

NCNLA EDUCATION COMMITTEE

The NCNLA Education Committee was integral to developing the virtual education program. Committee members offered insight from their areas of expertise to help create a diverse virtual education program. A special thanks to each member for their time!

Shannon Currey, Hoffman Nursery, Inc.

Leslie Moorman, North Carolina Urban Forest Council

Barbara Fair, North Carolina State University

Scott Myatt, Myatt Landscaping Concepts, Inc.

PJ Faust, Terra Green Landscapes

Donna Riddle, North Carolina Community College Horticulture Instructors Association

Gary Gittere, North Carolina Composting Council

NCNLA Board Liaisons:

Justin Snyder, Alamance Community College

Debbie Hamrick, North Carolina Farm Bureau Federation

Tim Johnson II, Tim Johnson Landscaping

Lee Ivy, Horticultural Science at North Carolina State University

Chason Johnson, Johnson Nursery Corp.

Yes, You Can Learn to Use Social Media and Grow Your Business!

Meredith J. Croom, Grants Creek Nursery

SPONSORED BY GRANTS CREEK NURSERY

Social media is one of the best ways to connect with people who already love your brand. It's also important for reaching those who haven't heard of your business yet. Getting started with social doesn't have to be scary or expensive. Businesses of any size can reach new markets, build brand awareness, and drive sales. Meredith shows that this doesn't have to be an all-or-nothing approach and that you can use different social channels to reach different audiences, or to meet different business goals.

Fundamentals of IPM: Pest Management Q&A

Suzanne Wainwright-Evans, Buglady Consulting

SPONSORED BY BASF

Invasive Pest Management (IPM) is a key approach for effectively managing and controlling weeds, pests and disease on sustainable farms. By implementing IPM techniques, farmers can prevent problems before they happen and better control those that do. Insect pests can cause some of the most disruptive and damaging issues on your farm, especially in the greenhouse. Join pest management and biocontrols expert Suzanne Wainwright of Buglady Consulting to ask your pressing pest management questions and get answers in real time! This session will include a brief introductory presentation, then will focus primarily on an attendee Q&A, so come prepared with your questions! Pesticide credit for D, N, O, X.

Planting for Pollinators, Part 1: Woody Plants and Vines

Annabel Renwick and Jason Holmes, Sarah P. Duke Gardens

SPONSORED BY UNIVERSITY OF MOUNT OLIVE

Woody plants and vines provide excellent habitat for pollinators and beneficial insects. Learn which trees, shrubs and vines attract and nurture native bees and butterflies, and how to structure plantings to foster

year-round pollinator interest. This session will include plants commonly available and lesser-known plants for pollinators in your landscapes and gardens. The plants will be presented from the pollinator’s perspective to demonstrate how designers, nurseries, landscapers and retailers can profit from the surge in pollinator plant demand. Organized by the NC Pollinator Conservation Alliance.

Planting for Pollinators, Part 2: Annuals, Perennials, Herbs and Grasses/Sedges

Annabel Renwick and Jason Holmes, Sarah P. Duke Gardens

SPONSORED BY ERNST SEEDS

Horticultural bling in the form of flowers provide pollinators with pollen and nectar rewards—both vitally important in sustaining populations. Most horticultural pollinator gardening or landscape plans rely on herbaceous plants. Dive below the surface of popular pollinator garden advice to talk about how the garden looks from the perspective of the pollinator. Learn why some common pollinator plants work and discover other plants that are beneficial. This session is instructive to designers, nurseries, landscapers and retailers and will up your pollinator plant game for spring 2021.

Soil Moisture: The Most Important Factor for the Survival of Newly Planted Tree

Wei Zhang, Zynnovation LLC and Dan Whitehead, HortSource

SPONSORED BY TREEDIAPER

This session reviews the key feature of a new irrigation technology: stabilizing soil moisture and significantly boosting the PAW without drowning the plant roots. In addition, Wei and Dan also discuss the other factors that may not result in casualty, but greatly impacts the overall plant health and overall growth potential, e.g., girdling roots and soil compaction.

Harness the Power of Mycorrhizae in Production and the Landscape

Blair Busenbark, Mycorrhizal Applications

SPONSORED BY MYCORRHIZAL APPLICATIONS

Blair Busenbark explores the science behind mycorrhizae and then moves his focus to how landscapers and growers can utilize the power of mycorrhizae in their operations. Greenhouse and nursery growers can experience the benefits of mycorrhizae in their own growing protocols to grow heartier, more vibrant and more resilient plants for retail sale and landscape installations. Landscape architects, installers and maintenance workers have been utilizing mycorrhizal inoculants

in transplanting and sustainable landscape design for at least the last couple of decades. Whether it is a reduction in landscape plant loss or improved plant performance, mycorrhizae reduces plant stress and, simply put, reduces your stress so you can focus on increasing profits.

Hard Rains and Hotter Days: Climate Change Now and in the Future in Our Region

Adam Terando, Southeast Climate Adaptation Science Center, North Carolina State University

As the level of greenhouse gases in the atmosphere rises, and the planet warms, all facets of society are beginning to grapple with what this globally changing climate means locally for their lives and livelihoods. In this session Dr. Adam Terando, research scientist with the US Geological Survey's Southeast Climate Adaptation Science Center, discusses

the most likely changes we could see in our region as laid out in the most recent National Climate Assessment and the North Carolina Climate Science Report. Dr. Terando also explores some of the potential climatic changes that would be most impactful to the nursery and landscape industries.

Red Headed Flea Beetle

Danny Lauderdale, North Carolina Cooperative Extension, Eastern Region

SPONSORED BY GREEN RESOURCE

The red headed flea beetle has been described by container nursery growers in North Carolina as their number one pest problem. Understanding the life cycle is important to building an integrated pest management program to keep populations low and limit foliar damage that results in lost sales. This presentation reviews those practices and presents insecticide research on management of larva and adult stages. *Pesticide credit for D, L, N, O.*

Outdoor Power Equipment and Chainsaw Safety

Mark Harrison, STIHL

Everyone in the green industry should receive comprehensive training on outdoor power equipment (OPE) like chainsaws and small excavators. This session focuses on chain saws and addresses safety tips for both the novice up to the professional. Mark leads an interactive discussion that includes operator PPE, the dangers of complacency, avoiding and/or overcoming bad habits, chain saw safety features, chain saw usage techniques and preventative maintenance.

SESSION WILL NOT BE AVAILABLE FOR VIEWING ON DEMAND.

Start Strong, Stay Healthy: From Prop Benches to Landscape Beds, Manage Plant Stress With IPM

Emma Lookabaugh, PhD, Turf and Ornamentals, BASF

In this presentation we identify common causes of plant stress and how we can use an integrated approach to prevent diseases, control insect pests and maintain healthy, stress-free plants.
